Yoo, S.-J. p70

Z

Zakharov, Y.V. p1, p400
Zhang, J. p112
Zhang, Y. p316
Zhao, F. p175
Zhao, W. p217
Zhou, W. p14

ARRAY SIGNAL PROCESSING

Impacting the coding-spreading trade-off in multiuser CDMA with iterative MMSE demodulation p155

AUDIO EQUIPMENT

Optimised soundprint selection for identification in audio streams p287

BROADCASTING

Performance issues in asymmetric TCP service provision using broadband satellite p95

CALIBRATION

Use of VNAs for wideband propagation measurements p411

CMOS INTEGRATED CIRCUITS

Traffic shaping system for ATM networks–supporting PC interface functions p169

CODES AND DECODING

Complex-valued collaborative coding multiple access for fading channels p327
Efficient optimal soft-decision decoding for multilevel block modulation codes p333
Evaluation of block turbo code performance with the reduced search trellis decoding method p125
Performance of hybrid II ARQ schemes using punctured RS code for wireless ATM p229
Unequal error protection TCM codes p265

COMMUNICATION SYSTEM THEORY

Adaptive least mean square CDMA detection with Gram-Schmidt pre-processing p249
Adaptive zero-forcing blind equalisers p348
Analysis of IP voice conferencing over EuroSkyWay satellite system p202
Analytical model for an assured forwarding differentiated service over wireless links p19
Anomaly detection in communication networks using wavelets p355
CMA-based nonlinear blind equaliser modelled by a two-layer feedforward neural network p243
Complex-valued collaborative coding multiple access for fading channels p327
Delay performance of voice and MMPP video traffic in cellular wireless ATM network p302
Efficient algorithm for mobile multicast using anycast group p14
Enhanced Birkhoff-von Neumann decomposition algorithm for input queued switches p339
Establishing the region of stability for an input queueing cell switch p343
Exact evaluation of capture effect under NCFSK demodulation p100
Finite-length decision-feedback equalisation for optimum combining diversity in digital cellular mobile radio p234
GMD: a new CDMA multiuser detection technique using an evolutionary algorithm p393
High-speed implementation of an ECC-based wireless authentication protocol on an ARM microprocessor p273
Hybrid uplink multi-carrier CDMA interference cancellation receiver p119
Impacting the coding-spreading trade-off in multiuser CDMA with iterative MMSE demodulation p155
Improving the performance of the FPBA algorithm using random transmitter power levels p212
Interdeparture time analysis of CBR traffic in AAL multiplexer with bursty background traffic p310
Model of the leaky bucket ATM generic flow control mechanism: a case study on solving large cyclic models p188
Node arrangement optimisation in linear multihop lightwave networks p369
Noise and intercept point calculation for modern radio receiver planning p255
Optical OPPM-CDMA receivers with chip-level detectors p31
Optimal packetisation of MPEG-4 using RTP over mobile networks p197
Performance analysis of a dynamic priority queue for traffic control of bursty traffic in ATM networks p181
Performance analysis of a multicell DS-CDMA system with base station diversity p112
Performance evaluation of multiple access control schemes for wireless multimedia services p86
Performance issues in asymmetric TCP service provision using broadband satellite p95
Performance of C-filter based adaptive spread spectrum receiver in non-Gaussian channels p321
Performance of fast start-up equaliser for broadband indoor radio p49
Performance of hybrid II ARQ schemes using punctured RS code for wireless ATM p229
Persistent reservation protocol for variable-length messages in WDM-based local networks p81
RAKE receiver using blind adaptive minimum output energy detection for DS/CDMA over multipath fading channels p385
Random-walk-based characterisation of multiple access interference in a DS/SSMA system p43
Regenerator placement algorithms for connection establishment in all-optical networks p25
Restorable VP-layout design in ATM networks for efficient support for multicast traffic p290
Signal design and receiver dimensioning for space-time Viterbi equalisation p132
Subspace-based multiuser detection for DS-CDMA systems with correlated noise p316
Wavelength requirements and routing for multicast connections in lightpath and light-tree models of WDM networks with limited drops p363

COMPUTATIONAL COMPLEXITY

Efficient optimal soft-decision decoding for multilevel block modulation codes p333
Enhanced Birkhoff-von Neumann decomposition algorithm for input queued switches p339
Evaluation of block turbo code performance with the reduced search trellis decoding method p125
Hybrid uplink multi-carrier CDMA interference cancellation receiver p119
Node arrangement optimisation in linear multihop lightwave networks p369
Sub-optimum MLSE detector with a folded state-transition trellis preselection stage p163

COMPUTER COMMUNICATIONS

Admission control for hard real-time connections in ATM LANs p217
Analysis of IP voice conferencing over EuroSkyWay satellite system p202
Analytical model for an assured forwarding differentiated service over wireless links p19
Anomaly detection in communication networks using wavelets p355
Efficient algorithm for mobile multicast using anycast group p14
Online error detection through observation of traffic self-similarity p38
Performance issues in asymmetric TCP service provision using broadband satellite p95
Persistent reservation protocol for variable-length messages in WDM-based local networks p81
Universal serial bus implementation in an integrated access chip for ISDN systems p207

DATA COMMUNICATION

Analysis of IP voice conferencing over EuroSkyWay satellite system p202
Anomaly detection in communication networks using wavelets p355
Efficient algorithm for mobile multicast using anycast group p14
Performance issues in asymmetric TCP service provision using broadband satellite p95
Persistent reservation protocol for variable-length messages in WDM-based local networks p81

DATA SECURITY

Cryptographic key assignment scheme for overcoming the incorrectness of the CHW scheme p260
High-speed implementation of an ECC-based wireless authentication protocol on an ARM microprocessor p273

DATABASE MANAGEMENT SYSTEMS

Optimised soundprint selection for identification in audio streams p287

ELECTROMAGNETIC COMPATIBILITY

Exact evaluation of capture effect under NCFSK demodulation p100
Finite-length decision-feedback equalisation for optimum combining diversity in digital cellular mobile radio p234
Hybrid uplink multi-carrier CDMA interference cancellation receiver p119
Impacting the coding-spreading trade-off in multiuser CDMA with iterative MMSE demodulation p155
Improving the performance of the FPBA algorithm using random transmitter power levels p212
Noise and intercept point calculation for modern radio receiver planning p255
Performance of fast start-up equaliser for broadband indoor radio p49
Random-walk-based characterisation of multiple access interference in a DS/SSMA system p43
Reducing frequency reuse distance in cellular communications using trellis coded modulation p149
Sub-optimum MLSE detector with a folded state-transition trellis preselection stage p163

ENGINEERING COMPUTING

CMA-based nonlinear blind equaliser modelled by a two-layer feedforward neural network p243

EXPERT SYSTEMS

Efficient algorithm for mobile multicast using anycast group p14

FEEDBACK

Impacting the coding-spreading trade-off in multiuser CDMA with iterative MMSE demodulation p155

FILTERS AND FILTERING

Performance of C-filter based adaptive spread spectrum receiver in non-Gaussian channels p321

INSTRUMENTATION AND MEASUREMENT

Use of VNAs for wideband propagation measurements p411

INTEGRATED CIRCUITS

Universal serial bus implementation in an integrated access chip for ISDN systems p207

INTERFERENCE SUPPRESSION

GMD: a new CDMA multiuser detection technique using an evolutionary algorithm p393
Hybrid uplink multi-carrier CDMA interference cancellation receiver p119
Impacting the coding-spreading trade-off in multiuser CDMA with iterative MMSE demodulation p155
Sub-optimum MLSE detector with a folded state-transition trellis preselection stage p163

ISDN

Universal serial bus implementation in an integrated access chip for ISDN systems p207

LASER BEAM MODULATION

Optical OPPM-CDMA receivers with chip-level detectors p31

MATHEMATICAL TECHNIQUES

Fuzzy congestion controller in a prioritised ATM switch p57
Unequal error protection TCM codes p265
Wavelength requirements and routing for multicast connections in lightpath and light-tree models of WDM networks with limited drops p363

MEASUREMENT SCIENCE

Use of VNAs for wideband propagation measurements p411

MICROPROCESSORS

High-speed implementation of an ECC-based wireless authentication protocol on an ARM microprocessor p273
Universal serial bus implementation in an integrated access chip for ISDN systems p207

MOBILE RADIO

Adaptive interleaving for OFDM in TDD systems p77
Analytical model for an assured forwarding differentiated service over wireless links p19
Application of singular value decomposition Prony (SVDP) algorithm to mobile radio imaging p405
Coherent multichannel reception of binary modulated signals with dependent Rician fading p105
Delay performance of voice and MMPP video traffic in cellular wireless ATM network p302
Efficient algorithm for mobile multicast using anycast group p14
Exact evaluation of capture effect under NCFSK demodulation p100
Fair resource sharing scheduling for cellular data services with QoS provisioning p144
Finite-length decision-feedback equalisation for optimum combining diversity in digital cellular mobile radio p234
High-speed implementation of an ECC-based wireless authentication protocol on an ARM microprocessor p273
Hybrid uplink multi-carrier CDMA interference cancellation receiver p119
Impacting the coding-spreading trade-off in multiuser CDMA with iterative MMSE demodulation p155
Optimal packetisation of MPEG-4 using RTP over mobile networks p197
Performance analysis of a multicell DS-CDMA system with base station diversity p112
Performance evaluation of multiple access control schemes for wireless multimedia services p86
Performance of fast start-up equaliser for broadband indoor radio p49
Reducing frequency reuse distance in cellular communications using trellis coded modulation p149
Use of VNAs for wideband propagation measurements p411

MODULATION

Adaptive interleaving for OFDM in TDD systems p77
Average SER for M-ary modulation systems with space diversity over independent and correlated Nakagami-m fading channels p377
Class of blind maximal ratio combining methods for digital communication systems p139
Coherent multichannel reception of binary modulated signals with dependent Rician fading p105
Complex-valued collaborative coding multiple access for fading channels p327
Exact evaluation of capture effect under NCFSK demodulation p100
Finite-length decision-feedback equalisation for optimum combining diversity in digital cellular mobile radio p234
Impacting the coding-spreading trade-off in multiuser CDMA with iterative MMSE demodulation p155
Optical OPPM-CDMA receivers with chip-level detectors p31
Reducing frequency reuse distance in cellular communications using trellis coded modulation p149
Spectral characteristics of dual header pulse interval modulation (DH-PIM) p280
Unequal error protection TCM codes p265

MULTIMEDIA

Analysis of IP voice conferencing over EuroSkyWay satellite system p202
Performance evaluation of multiple access control schemes for wireless multimedia services p86

NEURAL NETWORKS

CMA-based nonlinear blind equaliser modelled by a two-layer feedforward neural network p243

NUMERICAL ANALYSIS

Adaptive least mean square CDMA detection with Gram-Schmidt pre-processing p249
Adaptive zero-forcing blind equalisers p348
Anomaly detection in communication networks using wavelets p355
Application of singular value decomposition Prony (SVDP) algorithm to mobile radio imaging p405
Class of blind maximal ratio combining methods for digital communication systems p139
CMA-based nonlinear blind equaliser modelled by a two-layer feedforward neural network p243
Coherent multichannel reception of binary modulated signals with dependent Rician fading p105
Cryptographic key assignment scheme for overcoming the incorrectness of the CHW scheme p260
DFT-based frequency estimators with narrow acquisition range p1
Efficient optimal soft-decision decoding for multilevel block modulation codes p333
Enhanced Birkhoff-von Neumann decomposition algorithm for input queued switches p339
Exact evaluation of capture effect under NCFSK demodulation p100
Fair resource sharing scheduling for cellular data services with QoS provisioning p144
Impacting the coding-spreading trade-off in multiuser CDMA with iterative MMSE demodulation p155
Optimised soundprint selection for identification in audio streams p287
Performance of fast start-up equaliser for broadband indoor radio p49

OPTICAL COMMUNICATION

Node arrangement optimisation in linear multihop lightwave networks p369
Persistent reservation protocol for variable-length messages in WDM-based local networks p81
Regenerator placement algorithms for connection establishment in all-optical networks p25
Wavelength requirements and routing for multicast connections in lightpath and light-tree models of WDM networks with limited drops p363

OPTICAL COMMUNICATION EQUIPMENT

Optical OPPM-CDMA receivers with chip-level detectors p31
Regenerator placement algorithms for connection establishment in all-optical networks p25

OPTICAL IMAGE PROCESSING

Application of singular value decomposition Prony (SVDP) algorithm to mobile radio imaging p405
Policing method for Markovian traffic descriptors of VBR MPEG sources over ATM networks p70
Use of VNAs for wideband propagation measurements p411

OPTICAL SWITCHING

Node arrangement optimisation in linear multihop lightwave networks p369
Persistent reservation protocol for variable-length messages in WDM-based local networks p81
Regenerator placement algorithms for connection establishment in all-optical networks p25
Wavelength requirements and routing for multicast connections in lightpath and light-tree models of WDM networks with limited drops p363

OPTIMISATION

Class of blind maximal ratio combining methods for digital communication systems p139
Efficient optimal soft-decision decoding for multilevel block modulation codes p333
Fair resource sharing scheduling for cellular data services with QoS provisioning p144
GMD: a new CDMA multiuser detection technique using an evolutionary algorithm p393
Node arrangement optimisation in linear multihop lightwave networks p369
Regenerator placement algorithms for connection establishment in all-optical networks p25
Sub-optimum MLSE detector with a folded state-transition trellis preselection stage p163

PARAMETER ESTIMATION

Multiple-criteria call admission control scheme for ATM networks p175
Signal design and receiver dimensioning for space-time Viterbi equalisation p132

PERFORMANCE EVALUATION

Anomaly detection in communication networks using wavelets p355
Online error detection through observation of traffic self-similarity p38

RADIO SYSTEMS

Admission control for hard real-time connections in ATM LANs p217
Analysis of IP voice conferencing over EuroSkyWay satellite system p202
Average SER for M-ary modulation systems with space diversity over independent and correlated Nakagami-m fading channels p377
Class of blind maximal ratio combining methods for digital communication systems p139
CMA-based nonlinear blind equaliser modelled by a two-layer feedforward neural network p243
Complex-valued collaborative coding multiple access for fading channels p327
Exact evaluation of capture effect under NCFSK demodulation p100
Improving the performance of the FPBA algorithm using random transmitter power levels p212
Maximum likelihood single tone frequency estimation in a multipath channel p400
Noise and intercept point calculation for modern radio receiver planning p255

Performance issues in asymmetric TCP service provision using broadband satellite p95
Performance of hybrid II ARQ schemes using punctured RS code for wireless ATM p229
RAKE receiver using blind adaptive minimum output energy detection for DS/CDMA over multipath fading channels p385
Random-walk-based characterisation of multiple access interference in a DS/SSMA system p43
Signal design and receiver dimensioning for space-time Viterbi equalisation p132

RADIOWAVE PROPAGATION

Application of singular value decomposition Prony (SVDP) algorithm to mobile radio imaging p405
Use of VNAs for wideband propagation measurements p411

SIGNAL DETECTION

Adaptive least mean square CDMA detection with Gram-Schmidt pre-processing p249
Anomaly detection in communication networks using wavelets p355
GMD: a new CDMA multiuser detection technique using an evolutionary algorithm p393
Hybrid uplink multi-carrier CDMA interference cancellation receiver p119
Impacting the coding-spreading trade-off in multiuser CDMA with iterative MMSE demodulation p155
Optical OPPM-CDMA receivers with chip-level detectors p31
Performance of C-filter based adaptive spread spectrum receiver in non-Gaussian channels p321
RAKE receiver using blind adaptive minimum output energy detection for DS/CDMA over multipath fading channels p385
Sub-optimum MLSE detector with a folded state-transition trellis preselection stage p163
Subspace-based multiuser detection for DS-CDMA systems with correlated noise p316

SIGNAL PROCESSING

Anomaly detection in communication networks using wavelets p355
DFT-based frequency estimators with narrow acquisition range p1
Maximum likelihood single tone frequency estimation in a multipath channel p400
Optimised soundprint selection for identification in audio streams p287
Signal design and receiver dimensioning for space-time Viterbi equalisation p132
Universal serial bus implementation in an integrated access chip for ISDN systems p207

SOFTWARE TECHNIQUES

Universal serial bus implementation in an integrated access chip for ISDN systems p207

SPEECH COMMUNICATION AND PROCESSING

Optimised soundprint selection for identification in audio streams p287

STATISTICAL ANALYSIS

Adaptive interleaving for OFDM in TDD systems p77
Analytical model for an assured forwarding differentiated service over wireless links p19
Anomaly detection in communication networks using wavelets p355
Average SER for M-ary modulation systems with space diversity over independent and correlated Nakagami-m fading channels p377
Class of blind maximal ratio combining methods for digital communication systems p139
Coherent multichannel reception of binary modulated signals with dependent Rician fading p105
Delay performance of voice and MMPP video traffic in cellular wireless ATM network p302
Efficient optimal soft-decision decoding for multilevel block modulation codes p333
Enhanced Birkhoff-von Neumann decomposition algorithm for input queued switches p339
Establishing the region of stability for an input queueing cell switch p343
Evaluation of block turbo code performance with the reduced search trellis decoding method p125
Exact evaluation of capture effect under NCFSK demodulation p100
Exact model for analysis of shared buffer ATM switches with arbitrary traffic distribution p63
Improving the performance of the FPBA algorithm using random transmitter power levels p212
Maximum likelihood single tone frequency estimation in a multipath channel p400
Model of the leaky bucket ATM generic flow control mechanism: a case study on solving large cyclic models p188
Online error detection through observation of traffic self-similarity p38
Performance analysis of a dynamic priority queue for traffic control of bursty traffic in ATM networks p181
Performance of hybrid II ARQ schemes using punctured RS code for wireless ATM p229
Policing method for Markovian traffic descriptors of VBR MPEG sources over ATM networks p70
Random-walk-based characterisation of multiple access interference in a DS/SSMA system p43
Reducing frequency reuse distance in cellular communications using trellis coded modulation p149
Signal design and receiver dimensioning for space-time Viterbi equalisation p132
Sub-optimum MLSE detector with a folded state-transition trellis preselection stage p163

SWITCHING THEORY

Delay performance of voice and MMPP video traffic in cellular wireless ATM network p302
Enhanced Birkhoff-von Neumann decomposition algorithm for input queued switches p339
Establishing the region of stability for an input queueing cell switch p343
Exact model for analysis of shared buffer ATM switches with arbitrary traffic distribution p63
Fuzzy congestion controller in a prioritised ATM switch p57
Interdeparture time analysis of CBR traffic in AAL multiplexer with bursty background traffic p310
Multicast ABR service in ATM networks using a fuzzy-logic-based consolidation algorithm p8
Multiple-criteria call admission control scheme for ATM networks p175
Performance analysis of a dynamic priority queue for traffic control of bursty traffic in ATM networks p181
Policing method for Markovian traffic descriptors of VBR MPEG sources over ATM networks p70
Restorable VP-layout design in ATM networks for efficient support for multicast traffic p290
Traffic shaping system for ATM networks–supporting PC interface functions p169

TELECOMMUNICATION

Analysis of IP voice conferencing over EuroSkyWay satellite system p202
Analytical model for an assured forwarding differentiated service over wireless links p19
Delay performance of voice and MMPP video traffic in cellular wireless ATM network p302
Optimal packetisation of MPEG-4 using RTP over mobile networks p197
Performance evaluation of multiple access control schemes for wireless multimedia services p86
Policing method for Markovian traffic descriptors of VBR MPEG sources over ATM networks p70
